

PRODUCT BULLETIN

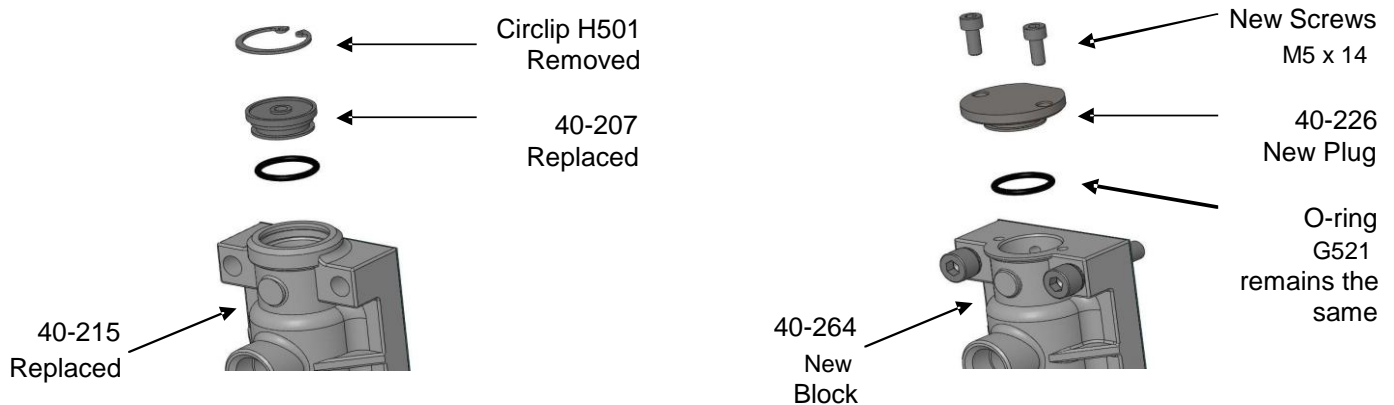

04 to 05 Design Level

BD Pump are committed to the continuous improvement of our product and service and with this in mind we are introducing new Valve Blocks and Valve Block Plugs to the range.

The traditional 'BD' Valve Block has always been considered a strength of the BD pump. Its simplicity, design and ease of maintenance has always been regarded as a significant strong point in the success of the pump. To bring in line with other models we are improving the design by removing the circlip on the B25 & B40 models and replacing this with a new plug retained with socket cap head screws. This change brings the design in line with the B06 and B15 models to standardise the range.

Typical new pump models will be :- B2505AABBTTS, B4005AABBTTS

The new Valve is totally inter-changeable with any previous model and also available as a replacement spare assembly :- SA10585

EFFECTIVE 16th NOVEMBER 2009

The one company that will deliver highly engineered fluid moving solutions and service in niche markets and extreme condition environments
